Removing old windows cleanly and at speed.

FEIN MF 14-180 construction cutter.

Making a clean job of removing old windows.

Damaged walls, broken tiles, high levels of dust and laborious rework... anyone who's removed old windows will be fully aware of the unpleasant "side effects" frequently associated with such work. FEIN's highly robust MF 14-180 construction cutter puts an end to all that! It features a special diamond disc which cuts through plaster, masonry, cement, tiles and metal bracings with one powerful and clean cut – without any damage and virtually no dust.

The way the cutter quickly and very cleanly removes old windows is impressive – especially amongst the most discerning customers. Thanks to the tool's high cutting speeds and the fact that no rework is required as it is with alternative methods, the procedure is also attractive as it offers great value for money.

Effective extraction

Low, sealed extraction housing for virtually dust-free working in conjunction with the FEIN DUSTEX 40

Exact depth stop

For precisely setting the cutting depth

High-quality diamond disc

For extreme service life with a whole host of materials such as tiles, natural stone, bricks, lime sand brick, plasterboard, Fermacell, concrete, reinforcements of up to 10 mm, metal mounting straps etc.

Removing old windows in one cut

Old windows are removed from their reveal in just one cut: the process is quick and precise, produces virtually no dust, and requires very little effort.

A cleaner cut

If the construction cutter is held at an angle during the cut, the cutting line is directly above the old window frame. Otherwise it's at a distance of 7–8 mm from the old window frame which is ideal for the frames around modern insulation glass windows.

Cutting through tiles, plaster and fastenings

The diamond disc cuts effortlessly through tiles and plaster. Even metal fastenings are no problem for the FEIN construction cutter.

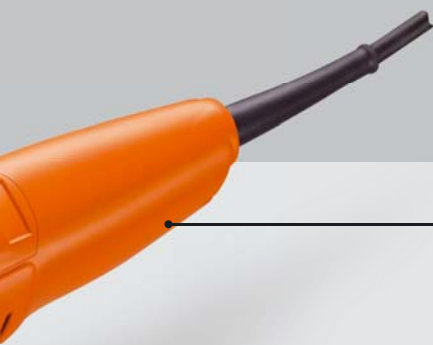

Cleanly removing the window frame

The FEIN SUPERCUT is the ideal supplement to the FEIN construction cutter, allowing the remaining window frames to be removed simply, quickly and cleanly without the risk of further damage.

No risk of overload

The FEIN construction cutter is fitted with electronic overload protection, which effectively protects the motor from overload. This firstly ensures that the tool enjoys a long service life and secondly prevents annoying downtimes.

Intelligent electronics

For reliably protecting against overload and unnecessary downtimes

HIGH-POWER MOTOR

For outstanding performance and stability

Safe guidance

Thanks to stable extra handle and the ergonomic shape of the construction cutter

The benefits at a glance:

- ▶ Extremely powerful and robust
- ▶ Work in a dust-free environment – thanks to the sealed extraction housing
- ▶ Precise cuts without any damage to the wall
- ▶ Cut is made at minimum distance (7–8 mm) above the old window frame
- ▶ If the tool is held at an angle, the cut is made directly above the old window frame

Technical data for MF 14-180

| | | |
|---------------------|--------|-----------------|
| Power | W | 1200 |
| Power / output | W | 750 |
| Idling speed | rpm | 7000 |
| Cable with plug | m | 4 |
| Weight | kg | 4.1 |
| Diamond disc | Ø (mm) | 180 |
| Cutting depth | mm | 0–50 |
